About Metaverse and Adult Metaverse

In October 2021, Facebook founder, Mark Zuckerberg, officially introduced the concept of the "Metaverse" and announced the company's commitment to building a fully immersive virtual world. The company was renamed from Facebook to "Meta" so as to reflect its focus on the development of the Metaverse.

Currently, the Metaverse remains in its infancy. Global consulting firm McKinsey & Company predicts that by 2030, the market size of the Metaverse will exceed \$5 trillion. People are gradually transitioning from the traditional internet to the Metaverse, a process that is expected to take more than 20 years, with a clear acceleration in its later stages.

Among the top 10 websites in the world by traffic, Pornhub (5.4 billion visits per month) and Xvideos (3.6 billion visits per month) are two adult websites. Traffic to adult websites accounts for over 30% of global internet usage, with more than 100 million visits daily, two-thirds of which come from men and one-third from women. In the future, most traditional adult websites are expected to be replaced by innovative adult Metaverse platforms.

| About Web3.0

There is no universally accepted definition for Web 3.0. However, the mainstream view lies in that it represents an improvement over Web 2.0. In the Web 2.0 era, data and profits were concentrated in the hands of large tech companies. Web 3.0 is aimed to return control of data and profits to users through decentralized technologies.

- If you are a consumer, participation in a high-quality Web 3.0 platform will bring you unexpected rewards alongside your consumption.
- If you are an entrepreneur, starting your business on a high-quality Web 3.0 platform will make you a core part of the platform and allow you to enjoy substantial returns.

Web1.0

Known as the "Information Internet", Web 1.0 allowed users "read-only" access to information. Platforms created all the values and all rights belonged entirely to the platforms. Representative companies of this era include Yahoo, Sohu, and Sina.

Web2.0

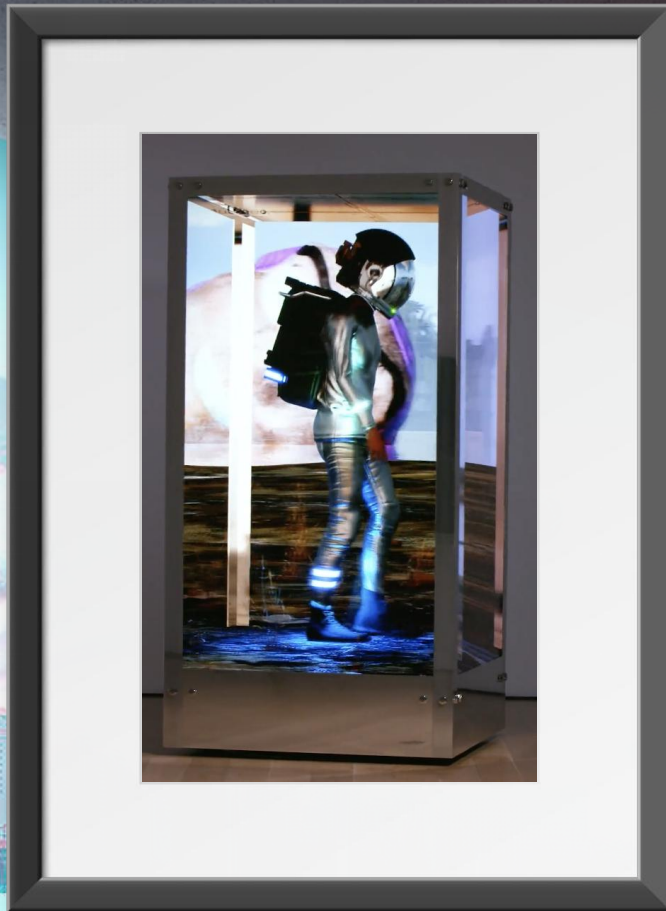

Web 2.0, also called the "Mobile Internet," granted users with both "read" and "write" permissions for information. While users created immense value for platforms, all rights still belonged to the platforms. Representative companies include Facebook, Alibaba, and Tencent.

Web3.0

Web 3.0, often referred to as the "Value Internet," grants users with the rights to "read," "write," and "own" information. It enables users to share profits with platforms. In the Web 3.0 era, platforms share all earnings with users. The more active users are and the more value they contribute, the greater the rewards they receive. These rewards are recorded using tokens issued by the platform. These tokens leverage blockchain technology and can be exchanged for company equity and dividends, creating a value-driven internet where everyone can participate, contributions are recorded, and every contribution has value.

This value internet, which represents the highest form of human social networking, is poised to become one of the greatest opportunities for the internet in the next three decades. With the evolution of the value internet, it will not only unite users and companies as shared beneficiaries but also foster integration among companies to form various ecosystems. In the future, business competition will no longer be between individual companies but between ecosystems.

About NFT

NFT(Non-Fungible Token)

NFT (Non-Fungible Token) is not only a crowdfunding method to support project creators but also a unit of data on the blockchain. Each token represents a unique piece of digital information, and serves as an electronic certificate or proof of ownership for virtual goods. Due to its non-fungible nature, NFTs can represent digital assets such as artwork, audio, videos, in-game items, or other forms of creative work. While the digital work itself can be copied infinitely, the tokens representing them can be fully tracked on their underlying blockchain, so that buyers get proof of ownership.

— From Wikipedia: wikipedia.org/wiki/Non-fungible_token

NFTs solve the copyright issues of digital collectibles, which significantly boost the development of the digital collectibles market and create numerous astonishing transaction records. For example, Beeple's Everydays: The First 5000 Days was sold for \$69.3 million through auction house of Christie in March 2021, becoming the most expensive NFT transaction to date. Several other works have also sold for over \$10 million each. RTFKT is a company specializing in creating virtual sneakers, digital fashion items, and NFTs. In December 2021, it was acquired by Nike. Some of the digital sneakers released by RTFKT now sell for over \$50,000 per pair, blending traditional sneaker culture with the emerging world of virtual goods. Inspired by RTFKT, other fashion categories such as hats, jackets, pants, belts, and accessories have also seen brands launching their own NFT digital collectibles.

In the adult industry, where works often lack legal and copyright protection, creators confront with significant limitations on their enthusiasm. NFTs can address this issue. Moreover, assets in the metaverse, such as land, clothing, and in-game items, can all be minted into NFTs, granting members with true ownership of their purchased assets. These assets can also be traded on markets outside the metaverse, which further enhances their value and utility.

About “UAA Meta”

ABOUT UAA META

Lots of internet technologies, such as online payments, streaming technologies, and VR, were initially pioneered and applied by the adult industry before spreading to other sectors. This reflects the deep connection between technology and fundamental needs of humanity.

In November 2021, engineers working at internet technology companies in Silicon Valley recognized the limitless potential of the metaverse. They quickly organized and collectively agreed that the demand for an adult metaverse would be stronger and realized sooner than a general-purpose metaverse. Thus, dozens of Silicon Valley engineers officially established and initiated the "UAA META" metaverse project, with a view to building "UAA META" into the leading brand in the adult metaverse.

UAA META, as a multi-user online interactive virtual world built under the Web 3.0 philosophy, is driven by user needs and powered by cutting-edge technologies such as blockchain, NFTs, AI, and XR. It not only provides players with a personalized and immersive gaming experience, but also meets the new demands for adult entertainment in the Web 3.0 era.

UAA META is one of the first institutions in the adult industry to tokenize assets on the blockchain and reform with STO (Security Token Offering). This ambitious endeavor requires massive user participation and continuous collective wisdom to establish an unparalleled metaverse. On November 11, 2021, the founding team officially launched UAA.COM, marking the beginning of the first phase, the "Primitive Era."

After three years of steady operation, the "Primitive Era" has accumulated 500,000 original residents and achieved an average daily traffic of over 1 million visits, successfully meeting its Phase 1 goals. Now, UAA META is entering the second phase, the "Lord Era," and is recruiting 2,000 responsible, visionary, and adventurous lords around the world. These lords will lead their territories' residents to expand and establish one glorious kingdom after another!

Following the "Primitive Era" and the "Lord Era," UAA META will successively launch the "Empire Era," the "Interstellar Era," and the "Eternal Era". Riding the wave of Web 3.0, it aims to create a legendary world where all participants can share in the tremendous benefits.

| One Goal

To establish "UAA META" as the leading brand in the adult metaverse.

Two Key Roles

1. Lord
2. Resident

01

Three Major Products

1. Game World
2. VR Glasses
3. Smart Intimate Devices

02

Four Core Systems

1. Social System
2. Ecosystem
3. Trading System
4. Reward System

03

Five Key Advantages

1. Resident Advantage
2. Ecological Advantage
3. Technological Advantage
4. Resource Advantage
5. Geographical Advantage

04

Six Unique Features

1. Passive Earning Model
2. Personalized Experience Model
3. AIGC (AI-Generated Content) Model
4. Smart Contract Model
5. Collective Intelligence Model
6. High Repurchase Model

05

Two Key Roles — Lord & Resident

The "UAA META" (hereinafter referred to as the System) establishes a total of 2,000 lord seats in the Lord Era. As platform shareholders, lords enjoy taxation rights, dividend rights, priority rights, and advisory rights.

To become a lord, individuals must purchase 1,000 USDT worth of UAA coins in the market and transfer them to a designated address for locked staking (released gradually over 12 months based on a gold standard) to exchange for a Founder Lord NFT Badge, which serves as proof of lordship. The Founder Lord NFT Badge is limited to 2,000 pieces.

Lord' s Rights	Description of Rights
Right 1	At the system's initialization, each lord is assigned 500 real residents, and thereafter, no fewer than 500 real residents are allocated annually.
Right 2	Lords receive 50% of the profit generated from the spending of their directly referred individuals as a referral reward.
Right 3	Lords can levy a 10% consumption tax on all residents except their directly referred individuals.
Right 4	Lords can share 5% of the platform's profit as an annual dividend.
Right 5	Lords receive a lifetime Supreme VIP membership on uaa.com, granting them free access to all content and features.
Right 6	When a new lord emerges within a territory, 10% of the new lord's income is shared based on the proximity of the invitation relationship.
Right 7	A lord who recommends more than 20 other lords will earn the title of "Creator" and receive an additional 2% of the profits generated from all resident consumption

Three Major Products — (1) Game World

Phase 1: City Building and Warfare Games

- Players can not only construct their own cities, own heroes and armies, but also engage in visits or battles between different cities.
- Apart from city-building and warfare games, card games will also be introduced to cater to players with varied interests.

Phase 2: Multiplayer Open-World Adult Game

- 2D cities in Phase 1 will be upgraded to 3D cities, continuing the city-building and warfare theme and enabling nation wars between lords.
- This phase will launch a metaverse preview, which is featured by an open-world adult game. Players can interact through their custom characters and form teams for collaborative gameplay.

Phase 3: Metaverse World with Realistic Role-Playing

- All kingdoms and cities are fully integrated into the metaverse, so that players can travel between cities and admire artistic creations of others.
- This phase unveils the fully realized metaverse, in which each player has a highly detailed and lifelike custom character. Gameplay becomes richer and more diverse, offering activities such as voice and video interactions, remote intimacy and collaborative gameplay. The virtual world becomes more captivating than the real world, which frees players from moral constraints and enables a truly immersive experience.

UAA META GAMES

In traditional games, players do not truly possess their in-game assets. Items hold no value outside the game. When players stop playing, all the time and money invested are lost, with game items permanently remaining within the game.

UAA META introduces P2E (Play to Earn) games and provides a completely different experience. Through a combination of Gaming + NFT + DeFi + Marketplace + Auction + Virtual Land, players truly own the assets they earn or purchase in the game. These assets can be bought and sold on external markets, providing real-world value.

Three Major Products — (2) VR Glasses

* VR glasses are one of the keys for entering the UAA META Metaverse.

UAA META GIASSES

- VR glasses are one of the keys for entering the UAA META Metaverse. Players can wear VR glasses to explore their favorite scenes, such as urban areas, campuses, valleys, forests, wastelands, and sci-fi worlds.
- Players can also customize their preferred appearance and voice, and set others' appearances and voices to their liking.
- Through VR glasses, every player can unleash their boundless imagination and fully express their individuality.

Three Major Products — (3) Smart Intimate Devices

* Smart intimate devices are the second key for entering the UAA META Metaverse.

UAA META TOYS

Smart intimate devices are the second key for entering the UAA META Metaverse.

Male-oriented devices are equipped with sensors that can accurately simulate the temperature, humidity, tightness, and contraction of other party.

Female-oriented devices are designed to sense parameters such as force, thickness, length, impact strength, temperature, and motion. A fully realistic simulation is provided.

Smart intimate devices can be used alone or randomly paired according to geographical location, and both parties can make voice or video calls through VR glasses during use.

In the metaverse, smart intimate devices can replicate the other person's real physical conditions and movements to the greatest extent when matched with a desirable player. Combined with the virtual appearance and voice of the other player - customizable to one's ideal "dream partner"- the experience becomes even more exciting and fresh.

Four Core Systems — (1) Social System

UAA META SOCIAL SYSTEM

Phase 1: Online Socializing

Supporting users in posting creations or updates, while other users can engage through comments, tipping, requests, likes, private messages, follows, and shares.

Allowing users to form private interest groups where they can engage in private chats, group chats, organize events, and even crowdfund projects.

Phase 2: Offline Socializing

Attracting a significant number of offline female members and providing privacy and security guarantees for members to connect and date safely.

Phase 3: Role-Playing

Players create and customize their preferred characters to enter the metaverse, showcasing a different side of their lives with a brand-new identity. The VR glasses and smart intimate devices enable players to remotely interact with others, and to enhance social connections in the virtual world.

| Four Core Systems — (2) Ecosystem

UAA META ECOSYSTEM

"UAA META" focuses on building a "Content Ecosystem" as well as a "Service Ecosystem," and ensuring a well-rounded environment where content is created and consumed, services are offered and utilized, so as to foster mutual prosperity between providers and consumers.

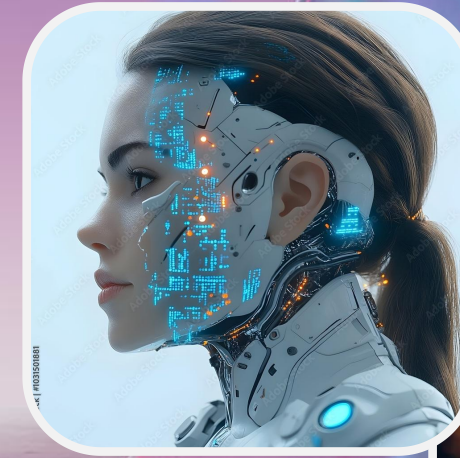

Content Ecosystem

Creators, illustrators, voice actors, studios, and influencers are actively invited to join the platform and publish original content. This content attracts new users, provides creators with greater income opportunities, boosts their enthusiasm, and establishes a thriving content ecosystem.

UAA META leverages NFTs to grant copyright protection to creators, and addresses the challenges of securing copyrights for adult content in the real world. Creators can earn significant income from NFT copyrights, encouraging high-quality content creation.

Service Ecosystem

Focusing on attracting female members and offering services such as online matchmaking, offline dating, live streaming, companionship chats, and travel companionship. Implementing a review system to help consumers avoid unsatisfactory experiences. Ensuring privacy and financial security through encrypted chats and escrow services, fostering a safe and trustworthy service ecosystem.

Four Core Systems — (3) Trading System

UAA META TRADING SYSTEM

In some countries or regions, e-commerce and social platforms must comply with national laws and regulations, imposing strict restrictions on adult-related content, products, or services. This has long suppressed a massive market, which now primarily operates covertly through underground channels. Such lack of regulation has led to rampant fraud and an extremely disorganized market.

Privacy Protection Secure Transactions

UAA META is aimed to establish an entirely new trading system through blockchain technology. Transactions are conducted via blockchain tokens to safeguard privacy and security of users. Additionally, the platform provides a review system and escrow support. After transactions, users can report scams, at which point the platform will withhold funds, preventing scammers from accessing the money. This mechanism further protects users' funds and personal safety.

Diversified Trading Products

The trading system provides convenient trading support for each resident, and residents can trade physical goods, virtual goods and services with each other.

- Virtual Item Transactions: Private photos, private videos, confidential information, and other virtual assets.
- Physical Item Transactions: Items like used lingerie, intimate products, and supplements for vitality and health.
- Service Transactions: Services such as online matchmaking, offline dating, live streaming, companionship chats, and travel companionship.

Four Core Systems — (4) Reward System

UAA META REWARD SYSTEM

- "UAA META" upholds the principles of Web 3.0 and shares more than 60% of its revenue with users who create value. The POVA (Proof of Valid Activity) blockchain consensus mechanism is employed to ensure that only legitimate and meaningful activities within the network are verified by its nodes.
- In the POVA system, valid activities may include completing transactions, executing smart contracts, or performing other actions that contribute to the development of the blockchain network. Only activities that meet specific criteria are recognized as valid and gain consensus approval.
- In UAA META, inviting new users, creating content, publishing posts, providing services or goods, reading, watching, subscribing, tipping, sharing, commenting, or reposting, reviewing and verifying content are defined as effective activities and are rewarded accordingly.
- "UAA META" encodes the invitation relationships and reward system into blockchain smart contracts, ensuring that the reward mechanism operates continuously and autonomously, akin to a natural law, sustaining indefinitely.

Five Key Advantages

1. Resident Advantage

500,000 Residents
Ready for Allocation

The system has 500,000 real registered members who have not yet been assigned to territories. Each lord will be allocated over 500 residents at the start, with an additional 500 residents granted annually for free.

2. Ecological Advantage

Established Content and
Service Ecosystems

With over 1 million daily visits, the system has attracted many creators and service providers, and laid a solid foundation for a comprehensive content and service ecosystem.

3. Technological Advantage

Scalable Infrastructure
Supporting a Billion Users

The system has operated steadily for 3 years without any downtime, demonstrating its ability of supporting up to a billion users. This robust infrastructure provides comprehensive technical support for the metaverse.

4. Resource Advantage

Massive Adult Content for
Training AI Models

With a vast repository of adult content, the platform is currently used to train large AI models. A groundbreaking AI tailored for the adult industry will soon be launched, which can generate ideal images, texts, and long videos based on user fantasies.

5. Geographical Advantage

Licensed for Legal Operation

UAA META, headquartered in Silicon Valley, is fully licensed to operate adult content platforms legally. The company strictly prohibits sensitive content involving minors, drugs, religion, or politics, ensuring the long-term stability and compliance of the platform.

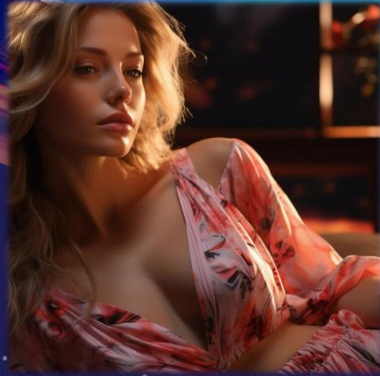

Six Unique Features

1.Passive Earning Model

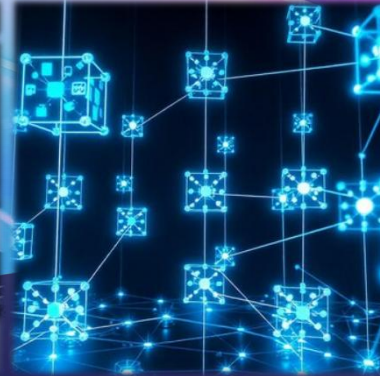

2.Personalized Content Model

3.AIGC Model

4.Smart Contract Model

5.Collective Intelligence Model

6.High Repurchase Model

The system evenly distributes residents to lords, in which these residents are real, active members who make purchases. Over 60% of the system's revenue is allocated as rewards to residents and lords, with a view to expanding the user base and enhancing competitiveness.

The system uses big data algorithms, precisely calculates each user's interests and preferences, and recommends tailored content to achieve a "personalized for everyone" experience.

Building on the OGC model, the system introduces the AIGC (AI-Generated Content) model, which can quickly generate adult videos based on user-specified scenarios, appearances, body features, voices, actions, and dialogues. The results are highly realistic, so that users can become their own directors and see exactly what they desire.

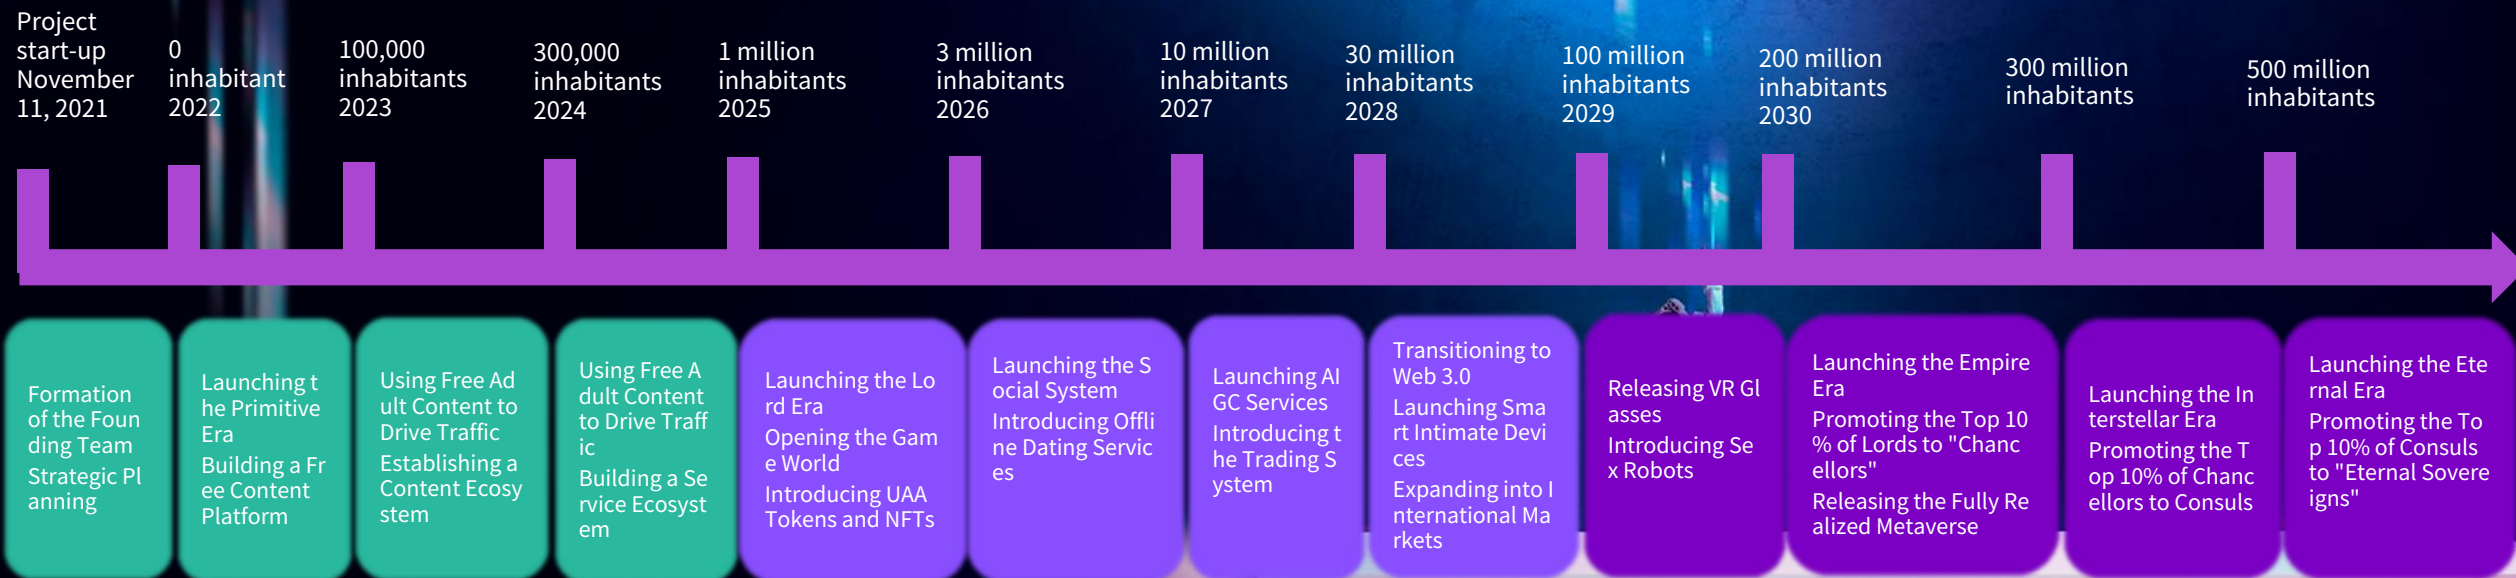

The system is transitioning to a Web 3.0 decentralized network based on blockchain. Invitation relationships and reward mechanisms are encoded into blockchain smart contracts to execute automatically without human intervention.

UAA META adopts a DAO (Decentralized Autonomous Organization) to harness collective intelligence. Members can participate in decision-making by holding governance tokens, with all decisions made collectively by the members.

The system is featured by highly repeatable transactions, including in-game items, online companionship, offline dating, subscription content, and group activities. These high-repurchase behaviors generate substantial rewards for both residents and lords.

Development Plan for "UAA META"

In the trillion-dollar adult metaverse industry, no leading brand has yet emerged, and no platform has been able to satisfy the majority. Once a dominant player takes the lead, a massive "black hole effect" will be created to block future competitors from entering the market. "UAA META" is determined to become the leader in the adult metaverse!

"UAA META" Charter

1. User Privacy First

- All users' digital identities within the UAA META metaverse will be respected. Users have the freedom to remain anonymous, use pseudonyms, or disclose their identities. Unauthorized collection, sharing, or trading of personal information is strictly prohibited.

2. Fair Access

- UAA META ensures fair participation and access to its virtual space for all adults, regardless of nationality, race, gender, or economic background.

3. Protection of Digital Assets and Virtual Property

- Users' digital assets within UAA META are protected by digital property rights. Unauthorized duplication, theft, or sale of others' virtual assets is considered a violation of the law.

4. Community Self-Governance

- Communities within UAA META have the right to establish rules based on their own needs and cultural backgrounds and to self-govern their internal affairs. The overarching governance framework respects and supports community autonomy.

5. Transparency and Openness of Data

- The operations of UAA META are transparent, particularly in the use and handling of user data. Users have the right to know how their data is stored and used and maintain full control over their data.

6. Inclusivity and Diversity

- UAA META encourages the coexistence of diverse cultures and opposes all forms of discrimination and prejudice. Users can freely express themselves and engage in metaverse activities without facing discrimination.

7. Behavioral Standards and Prevention of Virtual Violence

- Clear behavioral standards are enforced within UAA META. All forms of virtual violence, harassment, bullying, and other harmful behaviors are prohibited. Violations are promptly addressed according to the rules, and victims are provided with protection.

8. Creator Rights and Fair Compensation

- Creators, designers, and developers within UAA META will receive fair income and rewards proportional to their contributions. The decentralized economic model ensures creators benefit and stimulates further innovation and participation.

9. Ethical Technology and Sustainable Development

- The development of UAA META's technology adheres to ethical principles, which avoids potential harm to society and users. Additionally, the metaverse's technical infrastructure considers environmental sustainability, and minimizes energy consumption as well as environmental impact.

10. Cross-Platform Interoperability

- UAA META supports cross-platform interoperability, which enables users to seamlessly transfer and share their virtual identities, assets, and data across different virtual worlds and platforms, and fosters global metaverse connectivity.

"UAA META" — Ecological Governance Token: UAA Token

UAA Token

The UAA Token serves as the governance token within the UAA META ecosystem. By holding UAA Tokens, users can participate in community governance and voting, and get decision-making power on significant future developments. This ensures a more transparent and truly decentralized metaverse.

- Total Supply: 1 billion tokens
- Initial Price: \$0.0000000077 BNB
- Transaction Tax: 0

Factors Driving UAA Token Appreciation:

- Real application scenarios: Tokens can be used to purchase content, services, game items, goods, VR devices, and smart intimate hardware products;
- The resident population is expected to grow 2-3 times annually, reaching an estimated 200 million residents by the end of 2030. This growth ensures continuous demand for UAA Tokens from new users;
- 10% of UAA META's revenue is used to buy back and burn UAA Tokens on the secondary market;
- Another 10% of UAA META's revenue is used for establishing multi-currency liquidity pools for UAA Tokens, benefiting from market bull runs;
- Activities such as airdrop incentives and promotional events ensure sustained demand for UAA Tokens, driving steady price increases;

"UAA META" — UAA META Public Blockchain Plan

The adult industry has long been faced with the following issues:

1. Payment Privacy: Although many consumers wish to maintain privacy when making payments, traditional payment methods struggle to ensure anonymity.
2. Content Copyright Protection: Adult content is often duplicated and shared without authorization, so that it is difficult for creators to defend their rights.
3. Payment Method Acceptance: Many banks are unwilling to process transactions in the adult industry, which limits payment options for consumers.
4. Transparent and Fair Revenue Distribution: Revenue in the adult industry is often unfairly distributed, particularly to content creators and performers.
5. Identity Authentication and Verification: The industry requires strict identity verification to prevent minors from participating, but traditional methods risk privacy leaks.
6. Low Fees and Efficient Payments: Traditional payment methods incur high fees, especially for cross-border transactions.
7. Compliance and Content Review: Lots of adult content creators confront with restrictions due to compliance issues, limiting creative freedom.
8. Creator Privacy Protection: Adult content creators tend to require heightened privacy protection.
9. Loyalty and Incentive Mechanisms: Many adult platforms lack effective mechanisms to incentivize user loyalty.
10. Combating Fraud and Fake Content: The industry struggles with a significant presence of fake information and scams.

Before transitioning to Web 3.0, UAA META will launch its own public blockchain —UAA Chain

- It is specifically designed to address these pain points. The chain focuses on solving three core issues: payment, profit distribution, and privacy protection.
- UAA Chain leverages blockchain technology to offer fast, secure, and low-cost payment solutions. It supports multiple cryptocurrency payment methods, ensures transparent transactions and protects user privacy. UAA Chain makes use of smart contracts, automates revenue distribution, and ensures fair and efficient allocation of profits among content creators, platforms, and partners. This approach reduces intermediary costs and enhances transparency. Lastly, UAA Chain employs zero-knowledge proofs and data encryption to strengthen privacy protection, enhance user trust and create a more futuristic ecosystem for the adult industry.

"UAA META" — AI Agent Plan

AI Agent (Artificial Intelligence Agent) refers to a system based on AI technology that can perceive its environment, conduct decisions, and take actions to achieve specific goals. Typically, AI Agents include modules for perception, reasoning, decision-making, and execution. They can operate independently or interact with humans to finish complex tasks.

UAA META will introduce AI Agents tailored for the adult industry to achieve the following goals:

- **Intelligent Content Collection:** Unlike traditional web crawlers, AI Agents can intelligently analyze and gather the latest and most popular content from across the web, organize it according to standards and upload it seamlessly.
- **Intelligent Content Moderation:** AI Agents will quickly review comments, posts, and creations submitted by members, filter out violations and spam with high efficiency and fewer errors.
- **Intelligent Ad Placement:** AI Agents will design and execute advertising strategies to continuously attract a steady stream of new members to UAA META.
- **Intelligent Fraud Prevention:** The adult content industry is a high-risk area for fraud. AI Agents will analyze content for signs of scams or forgeries, remove or flag risky items to significantly lower fraudulent activity.
- **Intelligent Software Development:** AI Agents will analyze each member's behavior, feedback, and preferences, autonomously design and develop new features to enhance the user experience and achieve self-evolution.
- **Intelligent Economic Enhancement:** Equipped with advanced economic models, AI Agents will autonomously generate popular content, products, and services to boost UAA META's revenue and benefit all members.
- **Intelligent World Creation:** AI Agents will recognize the unique preferences of each member to create personalized worlds with distinct styles, layouts, appearances, and functionalities. These worlds will evolve autonomously to enrich the UAA META Metaverse.

UAA META will also provide each member with an access to the AI Agent interface, so that they can customize their AI Agent based on personal interests. Members can enjoy their own unique virtual robot girlfriend or boyfriend, tailored to their preferences and desires.

"UAA META" — Sex Robot Plan

"UAA META" — Sex Robot Plan

World-renowned AI companies such as Microsoft, Google, and Tesla have introduced highly intelligent humanoid robots that can handle tasks such as cleaning, organizing, carrying, medical assistance, and security at home. However, due to societal moral constraints, the likelihood for these robots to offer sexual services is extremely low.

"UAA META" plans to invest heavily in the development of sex robots, so as to release male and female models by 2030. While functioning as everyday household assistants, these robots will feature a hidden "Sexual Expert Mode" with the following capabilities:

- Trained on a vast database of adult resources (novels, audio, images, and videos), the robots are masters of seduction, fluent in all forms of flirtation, tones, techniques, and positions, which far surpass even the most experienced Casanovas.
- Every aspect of the robot's physical appearance can be tailored, including height, abs, facial features, voice, chest, hips, etc. Even intimate areas can be customized by thickness, length, elasticity, color, and optional heating functions.
- The robots are made from materials almost indistinguishable from human skin, and featured by temperature-controlled skin, lifelike facial expressions, and natural-looking features. They can even be cuddled to sleep, ensuring that you'll never feel lonely, cold, or isolated at night.

| FAQ

Q Are there any legal risks in participating in "UAA META"?

A In some countries or regions, participating in adult content related projects is illegal. Please comply with your local laws and regulations

Q Please give me one compelling reason for the necessity to join "UAA META"?

A Humorous Version: Once, I had a chance to make passive income, but I didn't cherish it. When I lost it, I deeply regretted it. There's no greater pain in life than this. If heaven gave me another chance, I would tell my past self three words: "Don't miss out." If I had to give this passive income opportunity a duration, I'd hope for 10,000 years.

Serious Version: Preparing for your next 10 years by positioning yourself in Web 3.0. Grabbing one or two key opportunities can make a significant difference in your life!

A Serious Version: Preparing for your next 10 years by positioning yourself in Web 3.0. Grabbing one or two key opportunities can make a significant difference in your life!

Q What if my country/region prohibits adult content related projects, but I still want to join?

A "UAA META" encourages compliance with local laws and regulations. However, according to its charter, UAA META supports the principle of fair access and provides the following measures for those who wish to participate:

(1) Lords can update their email at any time and use an email address unlinked to their real identity as their login ID.

(2) All rewards are issued in USDT and UAA Tokens. Users can withdraw their rewards through third-party blockchain exchanges. No bank account information is stored within the system.

(3) All communication is transmitted using encryption to prevent eavesdropping and includes a timed deletion feature for additional security.

The system also provides diverse technical solutions to protect user privacy and security.

| FAQ

Q How does the platform handle deposits and withdrawals?

A All deposits and withdrawals on the platform are processed in USDT and UAA Tokens. Users can exchange these tokens for their local currency via the third-party blockchain exchanges to ensure the maximum privacy and security for funds.

Q How can I maximize my earnings?

A The platform recommends the following strategies:

- 1) Inviting more residents;
- 2) Holding UAA Tokens, UAA Tokens have significant potential for value appreciation;
- 3) Contributing to the Platform: Activities like commenting, sharing, and posting generate more rewards.

Q What if the website is blocked in certain countries or regions?

A You can bypass the block by enabling a VPN. Additionally, the platform offers two solutions:

- (1) The platform regularly updates its domain via a designated address release page. You can always find the new domain as long as you remember the release page.
- (2) By installing the platform's mobile app, you won't need to worry about domain blocks anymore.

Q The project involves adult content, and I feel embarrassed to recommend it to my friends. What should I do?

A The platform provides support in the following ways:

- For lords, the platform initially gifts 500 residents and guarantees at least 500 additional residents annually, ensuring a substantial resident base even without personal referrals. For residents, the platform has a width limit of 100. Each resident has the chance to passively become an inviter and earn rewards without active referrals;
- The platform uses uaameta.com as the project management platform, which is different from the content platform uaa.com. Uaameta.com does not host any adult content, so that users can manage residents, view rewards, withdraw cash, play games, and invite new residents without concerns about inappropriate material.
- Invitation links or codes on external social media platforms can be shared to attract a broader audience of strangers, rather than focusing on a small circle of personal acquaintances.

| FAQ

Q Why does "UAA META" start with Chinese content?

A There are two main reasons:

1. The Chinese content market has a vast user base, with an average annual consumption per person of only \$20, which is significantly lower than the mature U.S. market (\$130 per person). This highlights enormous market potential.
2. In Western markets, even adult content has robust copyright protections, whereas Chinese content largely lacks such safeguards, allowing for rapid user base expansion during the early stages of the project.

Q How long can "UAA META" operate??

A "UAA META" is designed for long-term operation, which is based on the following factors:

1. In the U.S., "UAA META" is a legal project complying with local laws and regulations. Similarly, in most developed countries, the project operates legally without legal risks.
2. All reward distributions are maintained within reasonable limits, ensuring no risk of financial shortfalls.
3. After transitioning to Web 3.0, all invitation relationships and reward systems will be governed and executed via smart contracts. Decision-making will be managed by a DAO (Decentralized Autonomous Organization), where all members collectively hold decision-making power based on their tokens or voting weights. This prevents domination by a small group.
4. Human desires, such as those for food, rest, and intimacy, are perpetual. Unlike short-lived trends, adult content has been a constant demand for thousands of years. "UAA META" combines meeting physiological needs with the opportunity to earn substantial rewards, so that it is highly attractive to most of users.
5. Many projects fail due to stagnation and insufficient new users. However, as "UAA META" continues to expand its content and services, it will consistently attract new users and maintain a strong momentum.

UAA META

The resources of the real world have been entirely claimed through the Age of Exploration and countless wars, leaving little opportunity for large-scale wealth redistribution. However, with the emergence of the metaverse and NFTs, it has created a parallel world where much of the real world will be virtually recreated, and provided everyone with a new chance for wealth redistribution.

The development of super AI is progressing at an unimaginable speed. Elon Musk predicts that in the near future, the number of general-purpose humanoid robots will surpass the human population by 2-3 times, with most jobs being performed by robots. Robots will become the primary creators of wealth. By then, human attention will increasingly become a scarce resource, making it the main target of competition in the future metaverse. In the battle for users' attention, "UAA META" holds a natural advantage.

With the momentum of Web 3.0, "UAA META" leverages its multiple advantages to provide comprehensive solutions in technology, showcasing, interaction, payments, and security. Through introduction of "UAA META" to new users, members can earn generous rewards simply. "UAA META" embodies the principle of "consumption as investment" and is committed to creating a legendary metaverse where all participants can share in the immense benefits.

This time, let the "veteran enthusiasts" reshape the world!
